## ITIL® Awareness for Project Managers – 1 Day

### Program Overview

Effective Service Management requires a unique set of best practices knowledge combining the capabilities of ITIL® and Project Management (PMBOK®) guidance. This program enables your understanding of this unique knowledge and dependency among ITIL® and Project Management.

ITIL® is a set of best practices guidance that has become a worldwide-adopted framework for Information Technology Services Management (ITSM) by many Public & Private Organizations. Since early 1990, ITIL® has been evolving from focusing on Functions and Processes under versions 1 and 2, to focusing on the Full Service Lifecycle Management under version 3. In addition to the benefits of aligning IT goals and objectives with the business, improving quality and reducing cost of operation; ITSM and ITIL® V3 now emphasizes on the provision of guidance for the development of Services Strategy, the development of Service Design, the Transition of Services from current to desired state, the Implementation and the Continuous improvement of the those Services

The Project Management Body of Knowledge (PMBOK®) constitutes the official Project Management Institute PMI® guidance and is used to define the minimum knowledge an individual must possess to be considered a candidate for the Project Management Professional (PMP®) accreditation.

The combined capabilities of ITIL® and Project Management, and the clear understanding of key knowledge areas, activities of both frameworks and how they collaborate and correlate are critical success factors to ITSM program implementation.

### Duration

One day – Instructor-Led

### Target Audience

Whether you are a project manager, a member of a PMO or Governance office, you will need to have the initial knowledge of both ITIL® and Project Management and their dependencies.
